

# Linkage between mission critical systems and the cloud service

Industry: Finance

## Purpose of introducing HULFT products

Automatically convert items of personnel system data, which are in a fixed-length format, into a CSV format and then import them to Concur.

When starting linkage with the accounting system, refer to the items of master data and automatically convert them into your company's code.

## Issues prior to introducing HULFT products

Introduction of Concur has been decided. However, the different formats of multiple work systems must be made compatible with the Concur-specific data format.

## Effect of introducing HULFT products

Active operation was quickly made possible through speedy development and tests. Everything can be configured with the GUI, and no programming skill is required. This results in even output and easy standardization.
