

# Managing Payroll in an Internet Environment

Industry: Finance

## Purpose of introducing HULFT products

To create a secure environment in which payroll direct deposits and confirmation of deposits for small and mid-sized businesses without a large IT budget can be handled via the Internet.

## Issues prior to introducing HULFT products

Because data was sent to and received from client businesses via email, security was a concern. In addition, because received data was not integrated automatically with the accounting host, employees needed to manually transfer data.

## Effect of introducing HULFT products

The company is now able to process payroll information, including sensitive personal information, over the Internet, without putting a heavy financial burden on its client businesses. This led to increased client satisfaction. In addition, in-house labor hours were reduced, and productivity increased.
