

SuperStream Inc.

Organically integrating distributed data to enable effective utilization in business planning and management strategy

Solution overview

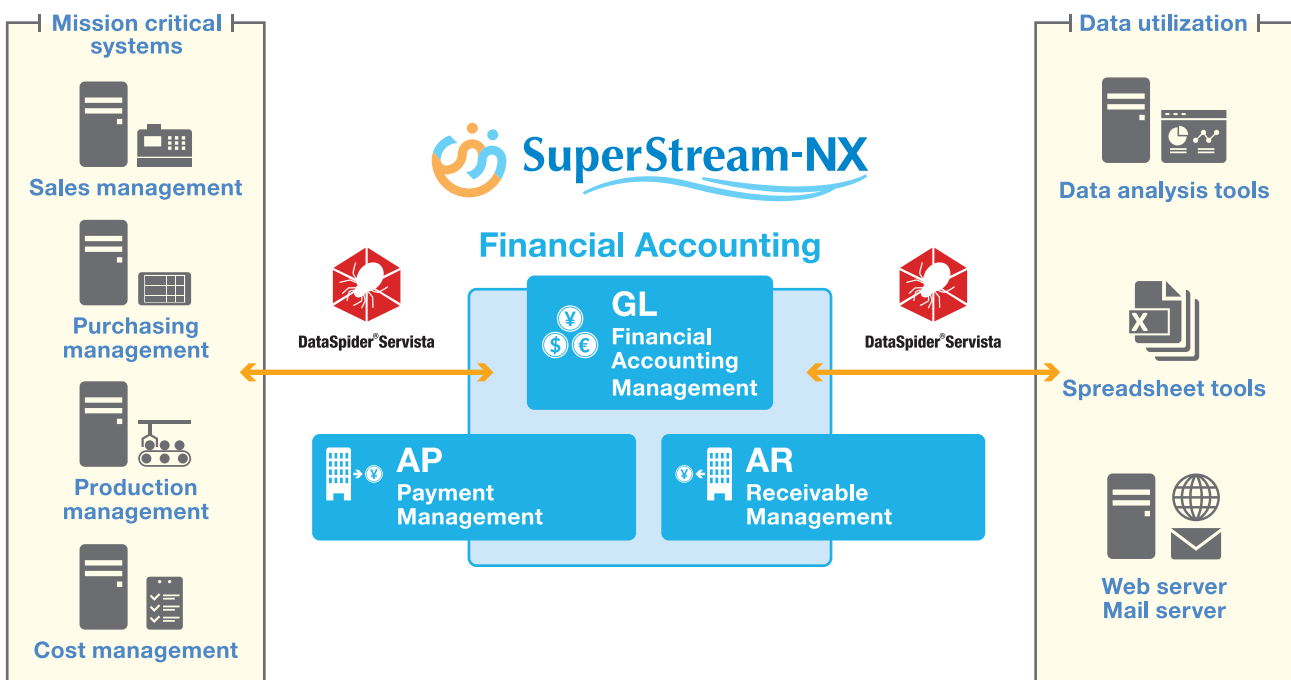

SuperStream-NX is an accounting system that supports the businesses of Japan-based global companies, which has been introduced to more than 9,000 companies. In addition to offering multilingual support in languages including English, Thai and Chinese as well as Japanese, it also supports payment slip data entry, balance management, tax support and other functionality for multiple currencies, supporting the operations of overseas subsidiaries and enabling Japanese head offices to reduce reporting workloads and enhance their corporate governance.

Combining SuperStream-NX with DataSpider Servista (the No. 1 data integration tool in Japan in terms of customer satisfaction for six consecutive years) enables integration with a wide range of business operation systems, at low cost and without the need for programming. By integrating distributed data in an organic manner, this solution enables the effective use of data in business planning and management strategies.

- ◆ Achieve inter-system integration at low cost, without programming
- ◆ Automated integration without manual intervention, effective for improving work process efficiency
- ◆ Export necessary data to Web, Excel or e-mail at will

Flexible integration of data with the Internet/cloud enables utilization by mission critical systems while at the same time implementing effective corporate governance.
