

Automating receipt of data from customers via a file sharing service

Industry: Construction

HULFT-WebFileTransfer

Purpose of introducing HULFT products

Exchange design data with affiliated companies more quickly and efficiently via a file sharing services, while also minimizing security risks.

Issues prior to introducing HULFT products

Design data used to be received from affiliated companies by email, fax or on paper. Combined with a lack of management rules, this caused problems such as incorrect data being sent. This process also left no logs, meaning that it took more effort to confirm data receipt.

Effects of introducing HULFT products

Reduced data delivery times from two days to ten minutes, and minimized security risks stemming from issues such as sending incorrect data or losing data. Automatic data-received emails meanwhile have enabled reliable receipt and reduced the effort required to confirm data has been received.
