

# Automatic BI conversion of ERP data

Industry: Finance

## Purpose of introducing HULFT products

Automate conversion and subsequent import processing of data from files in multiple CSV formats exported from multiple sub-systems.

## Issues prior to introducing HULFT products

The existing BI system used to obtain different types of data from multiple ERP sub-systems. This involved converting and importing data manually, which took time and effort.

## Effects of introducing HULFT products

Eliminated a manual process that used to take an average of 1.5 man-hours' work. Enabled to dedicate that time to BI analysis, and to producing more useful data output.
