

Bi-directional file transfers with outsourcing clients

Industry: IT/Outsourcing

HULFT

HULFT-WebConnect

Purpose of introducing HULFT products

Establish a more secure, efficient, and less expensive means for communication with outsourcing clients in accounting and payroll-related work. This will give rise to a communications infrastructure that can accommodate an increase in clients.

Issues prior to introducing HULFT products

Emails, FTP, and other different means were used to send files to and receive files from clients. This made data management troublesome, and also caused security concerns.

Effect of introducing HULFT products

Means for communications have been standardized. The number of management work-hours have been drastically reduced, and security has been ensured. We are now capable of promptly reacting to a rapid increase in clients.
