

Quickly Establishing a Communication Infrastructure for Medical Data Transfer

Industry: Printing

Purpose of introducing HULFT products

To establish a data transfer infrastructure that guarantees a high level of security and allows multiple files to be sent reliably and quickly.

Issues prior to introducing HULFT products

The company received sensitive personal information from medical institutions, and an appropriate level of security was not guaranteed. Because the medical institutions do not have any IT specialists, pre- and post-processing was carried out manually. This required many labor hours, and human errors occurred.

Effect of introducing HULFT products

Now, employees at the medical institutions can transfer data automatically by simply dragging the files. This has notably reduced the workload. In addition, because data delivery checks are carried out automatically, labor hours have been drastically reduced.
