

Automatically collect sales data from stores

Industry: Retail

Purpose of introducing HULFT products

Automatically collect and aggregate sales data from dozens of stores.

Issues prior to introducing HULFT products

Previously, items of daily sales data from dozens of stores (Excel) were aggregated manually. This took a lot of time, led to problems, and resulted in frequent mistakes. Original data that was meant to serve as a document for reporting to management was divided into different Excel files.

Effect of introducing HULFT products

Eliminating the need to manually collect and aggregate data allows management reports to be created automatically without mistakes. Many of the tasks are no longer dependent on individual skill, drastically reducing number of overtime hours worked by the person assigned to handle this.
