

DENTSU SOKEN (THAILAND) LIMITED

Solution

Sophisticated production scheduling through the integration of multiple systems, supporting operational decision-making

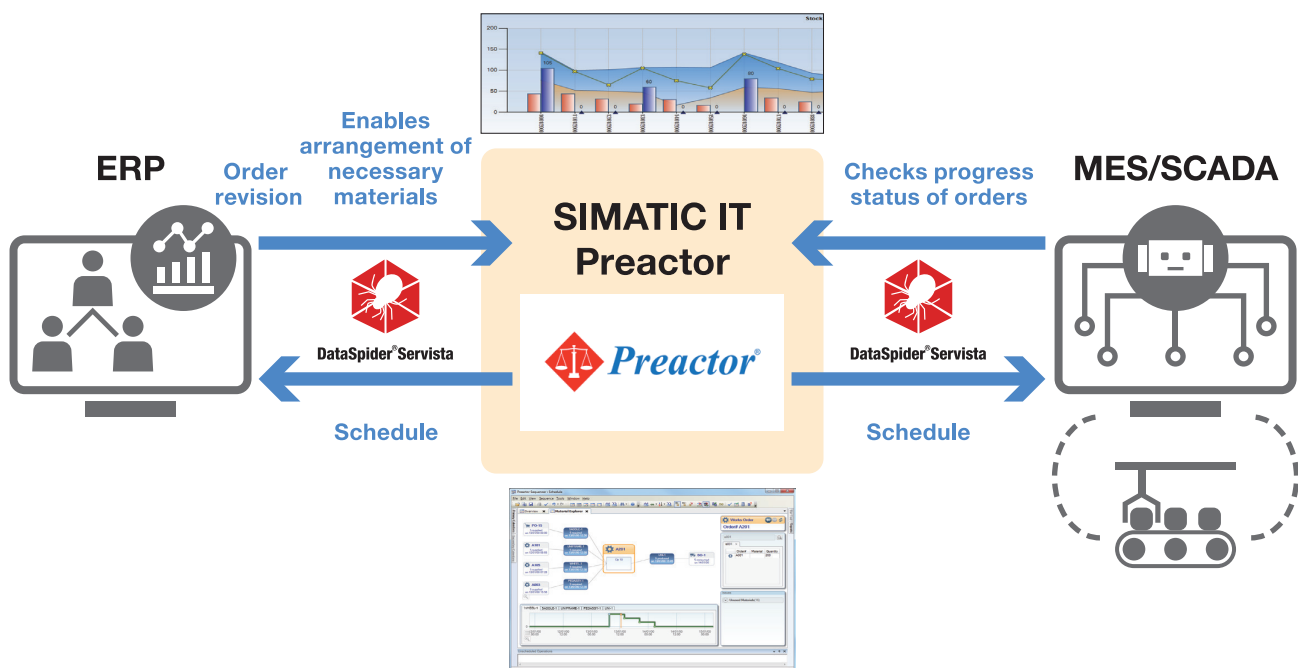

Solution overview

Preactor

- ◆ is an interactive, multi-constraint-capable production scheduling system.
- ◆ can be used to handle long-term strategic planning, over periods of several months to several years, as well as short-term planning, such as in adjusting production sequencing by changing priority ordering based on factors such as day-to-day inventory.
- ◆ can be integrated with customers' existing software, including ERP, MES, data gathering, prediction and demand planning applications.
- ◆ has computational functionality that considers various constraint conditions and speedy analysis functionality, to improve schedule visibility and consider optimal results. As a result, it helps to improve efficiency and ensure that delivery dates are met.
- ◆ enables users to confirm the scope of impact from schedule changes, supporting to make high accuracy schedule.

Combining Preactor with DataSpider Servista (the No. 1 data integration tool in Japan in terms of customer satisfaction for six consecutive years) enables integration with ERP, MES and on-site data gathering systems without the need for programming; facilitating accurate planning and improvement planning based on actual data values.
